## **"Too many cooks spoil the broth?"**

No - not in Ulm, where lots of different parties from the economy, science, society and the city administration created the Smart City Strategy for Ulm over the last two years.

What is a Smart City? In short, a Smart City makes more out of less. It needs fewer resources and at the same time creates more quality of life for citizens through digital and innovative solutions.

Ulm is one of the first cities in Germany to develop and adopt its own Smart City Strategy. On this afternoon we would like to present the Strategy to you and get to talk about it.

The event will be in English.

Workshop in the framework of the project "IOT4EU", supervised by VDI Technology Center and supported by BMBF
